WHY CHOOSE THE EAST COAST'S HAIR RESTORATION LEADER?

INNOVATION

Developed the Individual Graft Technique (IGT™) Procedure

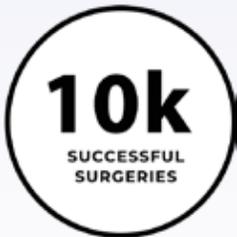

BEST TRAINED MD'S

Our surgeons are Emergency Room trained physicians

INDUSTRY RECOGNIZED

Members of the International Society of Hair Restoration Surgery

EXPERIENCE MATTERS

Put your trust in the most knowledgeable hair transplant experts. At DiStefano Hair Restoration Center, our skilled surgeons have performed over 10,000 surgeries. You will not find a more experienced hair restoration practice in all of New England!

GRAFTPARENCY

“Graftparency” means graft transparency, the process of informing our patients how many grafts they need and how many they will receive during their surgery. We believe that the patient should have all the information necessary to make an informed decision about their hair transplant, and the most important component is the number of grafts!

OUR GUARANTEE

At DiStefano Hair Restoration Center we stand by our results, and we guarantee patient satisfaction with all of our hair transplants. Approximately 92-95% of all transplanted hair is expected to grow. If the patient is unsatisfied with his or her results after 15 months, we pledge to replace any grafts that did not grow at no charge to the patient as long as all recommendations were followed.

TESTIMONIALS

Gerry Callahan

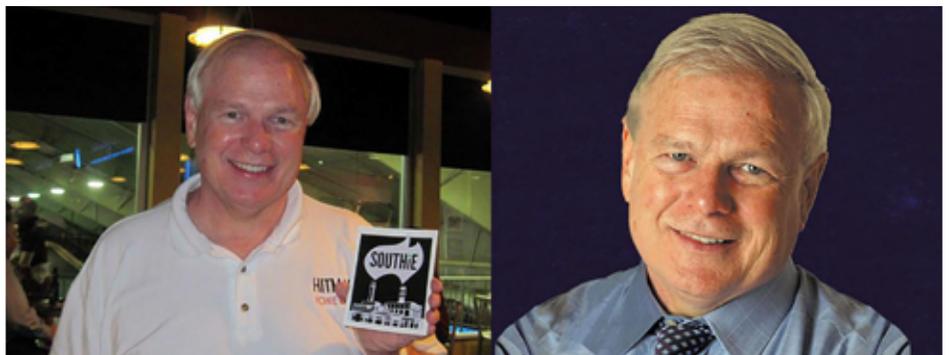

WEEI/ Radio Host

"I had a great experience with Dr. DiStefano and his staff!"

Howie Carr

Howie Carr Show

"I couldn't be happier. DiStefano did it!"

Sean Grande

Voice of the Celtics

"I am thrilled with my results from Dr. DiStefano!"

FUT VS. FUE TRANSPLANT

At DiStefano Hair Restoration Center, we offer patients two different hair transplant options:

- Follicular Unit Transplant (FUT)
- Follicular Unit Extraction (FUE)

While both methods of hair restoration produce great results, there are a few key differences. Most notably, FUE, which was perfected at DiStefano Hair Restoration Center, uses a method of extracting individual grafts one at a time from the donor area. The chart below outlines the reasons that a patient might choose one option or another.

CATEGORY	FUT	FUE	COMMENTS
Pain Management		✓	Many patients state that they have limited pain with the FUE procedure as there is no linear scar and no stitches
Scarring		✓	As each graft is individually extracted, there is no linear scarring with the FUE procedure
Recovery		✓	Patients can return to work faster with the FUE procedure than with traditional FUT
Costs	✓		As each graft must be individually extracted, the FUE procedure is much more time consuming for the staff, therefore, it is about 25% more costly than the FUT procedure
Surgery Size	✓		Due to the graft extracting technique of the FUE procedure, we are often limited in the number of grafts we can transplant in a single surgery compared to the FUT

FOLLICULAR UNIT TRANSPLANT (FUT)

WHAT IS THE FUT PROCEDURE?

During the FUT procedure, a strip of scalp is removed from the donor area on the back of the head. The incision is then carefully sutured, leaving a very small linear scar.

Our skilled technicians then carefully remove follicular units—which occur naturally in groups of one to four—from the scalp strip using a two-stage process. First, they cut the scalp strip into slivers. Then, they dissect the follicular units from those slivers.

Finally, the follicular units are transplanted to the recipient site. Tiny openings are created to receive individual follicular units, which are carefully placed to create a natural look.

WHO IS A GOOD CANDIDATE?

- Patients who need more than 2,000 grafts
- Patients who are looking to cover larger sections of their head in one session
- Our experienced surgeons will work with you to determine how many grafts you will need and to decide on the right hair transplant method for you.

Healed Scar: Month 12 & Month 16

FOLLICULAR UNIT EXTRACTION (FUE)

WHAT IS THE FUE PROCEDURE? HOW IS OUR PROCESS DIFFERENT?

With FUE, each follicular unit is removed individually from the back of the head using a device called Safe Scribe™, created here at DiStefano. This device microscopically separates hair follicles from the skin of the scalp to remove each follicular unit while leaving it intact for transplantation.

Many surgeons' techniques require that all follicular units be extracted at the beginning of the procedure and then stored in a preservative chemical - often for hours. It is thought that these processes have a drying effect on the follicles, which can impact their viability. With our methods, each follicle is removed from the donor area and immediately transplanted to the host site. The result is higher graft yields because the grafts have a much higher rate of survival after transplantation.

WHO IS A GOOD CANDIDATE?

- Patients who don't want any visible scarring from the procedure
- Patients who want to wear their hair any length after the procedure
- Patients who want the most natural results
- Patients who want a thicker, fuller head of hair
- Patients who want to return back to work the next day

Day 1 vs Day 7

NON-SURGICAL HAIR MAINTENANCE SOLUTIONS

Your transplanted hair is permanent, so you will not lose transplanted follicles. However, hair loss is progressive, which means that other areas of your scalp may continue to thin after your hair transplant. In order to maintain a great looking full head of hair, DiStefano Hair Restoration Center offers a number of other treatment options to our patients to complement your hair transplant. One of the best benefits of these treatments is that they are also extremely beneficial to the transplanted follicles as well, helping in the recovery of the follicles and ensuring healthier thicker hair.

Low Level Laser Therapy

Low-level laser therapy (LLLT) is one of the most effective ways to treat the progression of hair loss today. LLLT has been found to arrest or stabilize hair loss in about 90% of patients. With consistent, use, it has also been found to stimulate hair regrowth in about 50% of patients.

Propecia (Finasteride)

Finasteride is a tablet that is taken by mouth. It slows hair loss in addition and stimulates hair growth. It works best when it is taken as soon as hair loss is noticed, but it is also effective for later stage hair loss.

Formula 82M & 82F

Topical formulas containing Minoxidil Sulfate and Finasteride have been shown in studies to stimulate hair growth. At DiStefano, we offer two topical formulas: 82M (5% Minoxidil and Tretinoin) and 82F (5% Minoxidil and 0.25% Finasteride). Both are FDA-approved treatments for hair loss in men and women.

PhytoFoamRx

PhytoFoamRx is an all natural organic product base sourced from Brazil to create a phyto-complex (mixture of plant extracts). It is alcohol free and propylene glycol free. This special blend leaves the scalp feeling clean with no residue. It is great for patients with not only Finasteride sensitivities, but alcohol sensitivities as well!

LOW LEVEL LASER THERAPY

ABOUT THE LASERCAP

As the original technology of its kind, LaserCap has perfected the delivery of prescription-strength laser therapy for hair regrowth. A light and flexible cap lined with true laser diodes, LaserCap illuminates the hair follicles with monochromatic red laser light at a finely-tuned wavelength and intensity. This treatment, known as Low-Level-Laser Therapy (LLLT), is scientifically proven to restore the hair of both men and women suffering from thinning and balding. The LaserCap is FDA-cleared to promote hair regrowth in both men and women with pattern hair loss.

FDA-Cleared Laser Therapy Technology

Only Available by Prescription

Portable and Easy to Use

Safe, Natural, and Drug-Free

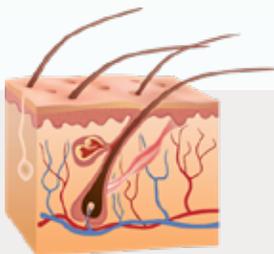

The LaserCap is very easy to use. After charging the battery pack, insert LaserCap into your favorite hat, place the cap on your head, and turn it on for 30 minutes. Portable, hands-free, and discreet, LaserCap can be used in the comfort of your own home, at the gym, on your daily commute, anywhere and anytime that is convenient for you! Just wear the LaserCap for 30 minutes every other day to regrow and restore your natural hair.

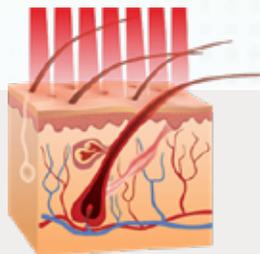

LOW LEVEL LASER THERAPY

HOW IT WORKS

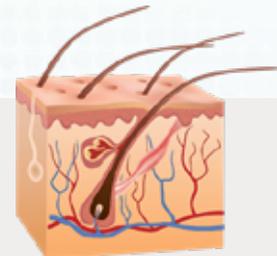

The LaserCap uses Low-Level-Laser Therapy (LLLT), also known as Low-Level-Light Therapy, Photobiomodulation Therapy, or Laser Hair Therapy, to re-energize inactive hair follicles. Red laser light is absorbed by specialized cells deep within the follicle, providing energy to enhance cellular respiration and hair growth. As a result, follicles become awakened from their inactive state and produce thicker, healthier hair. LLLT has proven to be a safe and effective treatment for both male and female pattern pattern hair loss in numerous large, high quality clinical trials.

Follicles are inactive, growing slowly and producing thin hair.

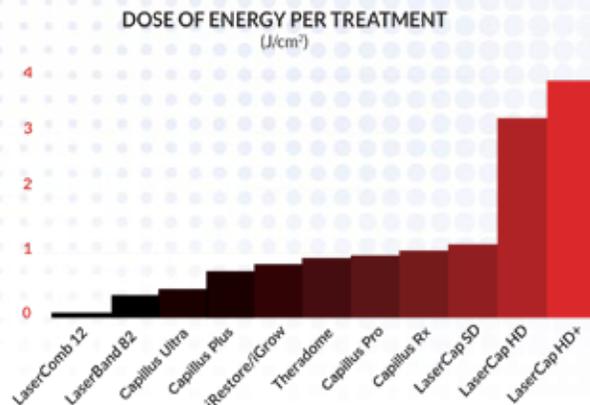

Laser light is absorbed by the cells of the hair follicle, providing energy to enhance cellular respiration and hair growth.

Dormant follicles are awakened from their inactive state and produce thicker, healthier hair.

SUPERIOR SCIENCE & TECHNOLOGY

Did you know that LaserCap delivers a higher dose of light energy per treatment than all other popular laser therapy devices for hair restoration? Many of these devices in fact deliver an energy dose well below what experts consider to be optimal.

LOW LEVEL LASER THERAPY

LASERCAP PRODUCTS

3 LaserCap choices for every budget and treatment need.

LaserCap SD

Prescription-strength laser therapy at a great value

- 1.15 J/cm² Energy Dose
- Standard Coverage Area
- 80 Laser Diodes

LaserCap HD

Our mid-range cap, well-suited for most patients

- 3.23 J/cm² Energy Dose
- Standard Coverage Area
- 224 Laser Diodes

LaserCap HD+

Our premium cap, best for patients with larger heads or diffuse thinning

- 3.93 J/cm² Energy Dose
- Large Coverage Area
- 304 Laser Diodes

LaserCap Company is confident in the quality of our products, we are proud to offer a best-in-industry lifetime warranty policy and one year satisfaction guarantee.

Month 1 vs. Month 12

FORMULA 82M & 82F

FORMULA 82M

Minoxidil Sulfate is an active metabolite which has been shown in studies to stimulate hair growth. It has been the number one topical therapy for Androgenetic Alopecia (AGA) since receiving FDA clearance in the US in 1988.

Formula 82M contains (5%) Minoxidil and Tretinoin, along with a topical steroid to improve efficacy and reduce irritation, complemented by other proprietary ingredients that improve the formula's overall effectiveness, stability and usability.

FORMULA 82F

Formula 82F "Finoxidil" is a topical compounded prescription solution containing the FDA-approved hair growth medication Finasteride.

Finasteride is a 5 α -reductase inhibitor that works by decreasing the production of Dihydrotestosterone (DHT) in tissues in the scalp. It has been approved as a treatment for hair loss in the US since 1997.

Formula 82F contains (5%) Minoxidil and (.25%) Finasteride along with a topical steroid to improve efficacy and reduce irritation, complemented by other proprietary ingredients that improve the formula's overall effectiveness, stability and usability.

PHYTOFOAM

WHAT IS PHYTOFOAM?

PhytoFoamRx™, compounded with TrichoFoam™, is an alcohol-free and propylene glycol-free foam vehicle for water soluble and some liposoluble actives. Formulated with gentle, non-irritating and sensory-pleasing ingredients. Our blend at DiStefano contains Latanoprost, Minoxidil, and Spironolactone. This compound is clinically proven to help thicken hair and stop loss.

Latanoprost was originally used to promote density in eyebrows. Overtime it has been tested and proven to work on the scalp as well, yielding fantastic results.

Spironolactone is a highly effective DHT blocker and alternative to Finasteride. This blend is great for people whom have rare adverse reactions Finasteride, but still want to incorporate a DHT blocker into their preventative hair loss regimen.

PhytoFoamRx™ has been shown to be an ideal and stable vehicle for a number of active pharmaceutical ingredients. It is a soft foam with minimal oiliness and is free of propellants.

BENEFITS

- Soft formula without propellants
- Non-irritating vehicle
- Unique compatibility and proven stability with APIs and DCIs, water soluble and liposoluble, such as Minoxidil Base
- Provides soft foam with minimal oiliness
- Drip-free
- Patient-Specific prescription is required

THE DISTEFANO GUARANTEE

At DiStefano Hair Restoration Center, We Guarantee patient satisfaction with all of our hair transplants.

Approximately 92-95% of all the transplanted hair is expected to grow. If a patient, after completing an in person follow-up visit at 9 and 15 months, is unsatisfied with his or her hair transplant, we pledge to replace any graft that did not grow at no charge to the patient. Less than 2% of DiStefano patients redeem this guarantee each year. The vast majority of patients are very pleased with the results. If recommended, you will need to be on a hair maintenance therapy such as Propecia, 82M/F, or Low Level Laser Therapy in order to qualify for this guarantee.
